**Warm Tips**

- Please check whether the device is connected with power and your phone is connected with WiFi.
- Check routers: If the router is dual-band router, please select a 2.4GHz network to add device. You also need to open the router broadcasting function.
- Set up the wireless router: Set encryption method as WPA2-PSK authorization type as AES, or set both as auto. The Wireless mode cannot be only 5GHz. Please name router WiFi in English. In order to stay strong WiFi signal, please keep device and router within a certain distance.
- Check whether connected devices have reached the Maximum number router connection. If so, please try to turn off the WiFi connection of some devices.
- Make sure router wireless MAC filtering function is enabled.
- Remove the device from the filter list and make sure that router is not prohibiting device from connection.
- Make sure the entered password is correct when adding a new device.
- App for more operations, please refer to the corresponding application tutorial.
